

Process-Oriented Embedded System Development

Foundation and Application of the CIP Method

Chapter 2 to 7

Hugo Fierz
fierz@ciptool.ch

Draft Version 10, August 2003

Chapter 2 to 7

2	Domain-Oriented Software Development	1
2.1	The Software Engineering Problem	2
2.2	Domain-Oriented Software Development	4
3	Problem Decomposition for Embedded Systems	13
3.1	Separation of Functionality and Connection	14
3.2	The Decomposition Problem	18
3.3	The Process-Oriented Problem Decomposition	25
4	Process-Oriented Development of Embedded Functions	33
4.1	The Process-Oriented Development Concepts	33
4.2	Compositional Behavioural Models	35
4.3	Behavioural Compatibility ascertained by Context Models	45
5	Compositional Behavioural Modelling with CIP	55
5.1	An Overview of the Architecture of CIP Models	56
5.2	Component Categories: Processes and Clusters	57
5.3	CIP Connector Categories: Stimulation and State Sharing	63
5.4	An Introduction to CIP Models	66
6	The CIPModelling Framework	77
6.1	CIP Model Structure	78
6.2	Processes – Extended Finite State Machines	79
6.3	Message Passing Interaction – Communication	89
6.4	Pulse Cast Interaction	97
6.5	State Inspection Interaction	112
6.6	Mode Control Interaction	120
6.7	Modelling Sugar Supported by CIP Tool	128
7	Implementation of CIP Models	133
7.1	The CIP Model Implementation Task	133
7.2	How a CIP Model is Implemented	135
